AVISO DE CONFERENCIA

Crowdsourced research: collective intelligence for collective problems

Daniel Lombraña González
Director y fundador de SciFabric LTD

Facultad de Informática
Sala de Grados • 30 de noviembre de 2015 • 18:00
Entrada libre hasta completar el aforo

Resumen

Crowdsourced research is becoming one of the most important topics on the scientific field. Why? Because when humans and computers work together they can take wiser decisions than them alone, leading to new discoveries, citizen participation and a more critical thinking in our society.

In this conference I'll introduce the grassroots movement, citizen science, through real examples where professionals and amateurs have done an amazing work through the open science movement.

Sobre Daniel Lombraña

A computer engineer by training, Daniel holds a PhD in parallel genetic programming. He has almost 10 years experience of citizen science projects and crowdsourcing technologies in the scientific field. Daniel is the co-founder and project lead of the Crowdcrafting platform and of PyBossa software.
