### **Resumen:**

---

Artificial intelligence (AI) has become an important aspect of our everyday life. From a common topic in science fiction and future studies it is now being used in a wide spectrum of day to day services, both for advanced technologies and personal applications. AI seems associated with startups and several companies do develop and promote AI as their unique selling product. However, with almost 7 years of continuous 'AI' developments how promising could an AI startup still be? This talk aims to describe the AI challenges as experienced from the eyes of a startup, its challenges and opportunities as well as how connections with lead Universities in the area could help in future synergies.

### **Sobre Stelios Kapetanakis:**

---

Stelios Kapetanakis is an Associate Professor in Business intelligence and Enterprise in the School of Computing, Engineering and Mathematics, University of Brighton. He has been the Head of Research and Development in Kare, Knowledgeware, a London startup specialising in Natural Language processing. He has a PhD in Artificial Intelligence and an MBA in Knowledge and Innovation Management. For the past 12 years Dr Kapetanakis has been working in applied Artificial Intelligence projects with national and international vendors like the British Railways, Vivaki Nerve Centre, MediaCom, among others. His research interests include large scale Data Mining, Deep Learning, Case-based Reasoning and Spatial-Temporal reasoning.
