

As a Junior Software Engineer you work in a team of young and highly skilled Software Engineers. This team forms the link between Luciad and our customers.

Are you eager to develop your skills? Do you have a passion to solve development problems? Want to join a Worldwide Leader?

Check out Luciad and you might just be our newest team member!

Luciad delivers geospatial software solutions that power the world's mission critical operations. Our applications simplify the lives of developers and end users with advanced visual analytics that allow them to unlock the potential of real time location intelligence and create the foundations for next generation geospatial systems.

From safeguarding critical assets to creating the digital infrastructure for smart cities, we help users implement intuitive command and control systems. Our customers depend on Luciad for high performance visualization that allows them to implement scalable solutions. "Connect, visualize, analyze, act" is both our method and our motto.

For our Services department we are looking for passionate top talents, to join the team as **Junior Software Engineer**, based in Leuven, Belgium.

Is it a match?

As a Junior Software Engineer you work in a team of young and highly skilled Software Engineers. This team forms the link between Luciad and our customers. Together with your teammates you participate in software development projects, alternated with on-site training and consultancy with customer development teams.

In software development projects, you work closely together with an agile team of software engineers to analyze the needs of our customers and propose solutions. You participate in design and implementation of beautiful, high performance applications based on our products.

The team is responsible for the entire development cycle of the applications, from analysis and design over development, implementation and testing. By providing training and consultancy at the customer's site, you advise and assist our customer's development teams. This experience will allow you to further develop your geospatial experience and domain knowledge and provide consultancy throughout the entire development cycle of the customer.

Is it you we are looking for?

- University degree in Informatics or Computer Science, or equivalent by experience

- High level of JAVA is a MUST *Knowledge in JavaScript, Web Services and .NET is considered a plus*
- Domain knowledge in development of geospatial applications is considered a plus
- You have a problem-solving and “Can Do” attitude
- Good communication skills in both spoken and written English and one additional language
- You are flexible to travel around the world, frequency of 30% of your time

What do you get in return?

Luciad offers fascinating career opportunities in a truly high-tech international environment with opportunities to travel in Europe, America and Asia. Employees are encouraged to continue developing their individual skills and personality in a growing and dynamic community. Next to a competitive remuneration package including fringe benefits, the company supports flexible working hours based on its culture of personal responsibility and team spirit.
