

Software Development Engineer

Job ID: 515182 | Amazon Dev Centre (London) Ltd
Amazon Video / Software Development

DESCRIPTION

Television is changing. Amazon Video would like to offer every film to everyone to watch instantly anywhere. Would you like to join us to help shape the future of TV?

AV deliver films and TV shows instantly to PCs, portable devices, consoles, and TVs worldwide. We have opportunities for talented engineers, designers, testers, product managers, and technical leaders to join our development teams in London to work on global features in our development teams. You will be encouraged to see the big picture, be creative, and positively impact millions of customers. This is a young and evolving business where creativity and drive can have a lasting impact on the way video is enjoyed worldwide.

The AV Financial Systems group is seeking talented Software Development Engineers to build world-class bespoke financial software from the ground up to support our expanding global video business. As an Amazon software engineer in this team you will design, develop, test and deploy new features to automate financial processes. A successful candidate will have strong technical ability, great communication skills and an established background in developing full-stack n-tier systems. An interest in how we account for and manage the financials for a multi-billion dollar business would also be beneficial.

BASIC QUALIFICATIONS

- Degree in Computer Science or related field, or equivalent work experience
- Technical experience as software developer, or related role
- Computer Science fundamentals in object-oriented design
- Computer Science fundamentals in data structures
- Computer Science fundamentals in algorithm design, problem solving, and complexity analysis
- Experience developing in at least one of Java, C, C++, or Perl

PREFERRED QUALIFICATIONS

- Knowledge of professional software engineering practices & best practices for the full software development life cycle, including coding standards, code reviews, source control management, build processes, testing, and operations
- Hands-on expertise in many disparate technologies, typically ranging from front-end user interfaces through to back-end systems and all points in between
- Experience developing financial or accounting software
