Introduction

The anomaly detection problem

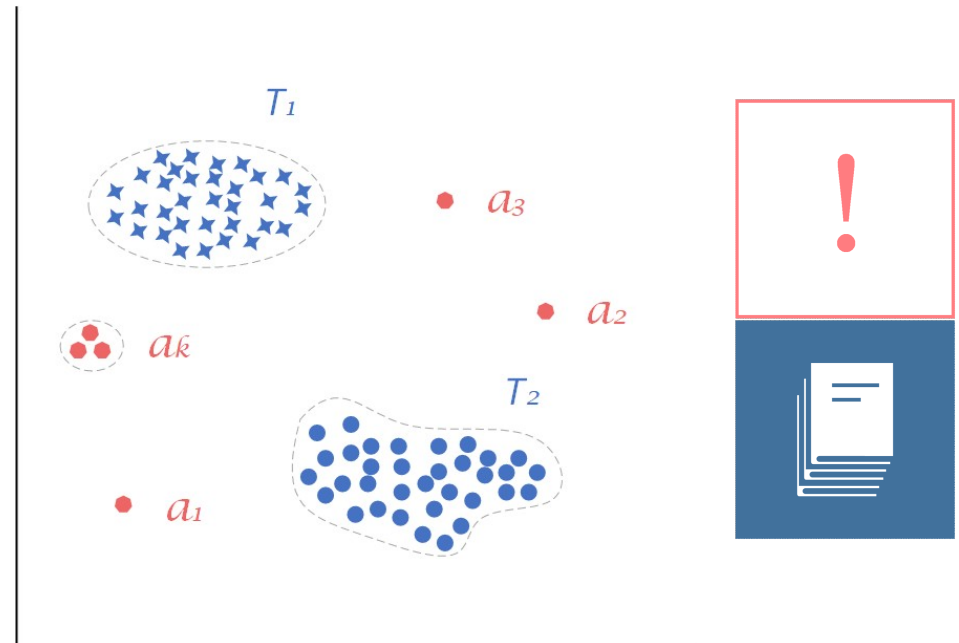

- **Global context.**
 - Technological advances.
 - Economic globalization.
 - Importance of systems optimization.
 - Environmental impact.
 - Safety and quality standards.

Introduction

The anomaly detection problem

- **Definition.**
 - Data patterns that conform unexpected behavior.

Introduction

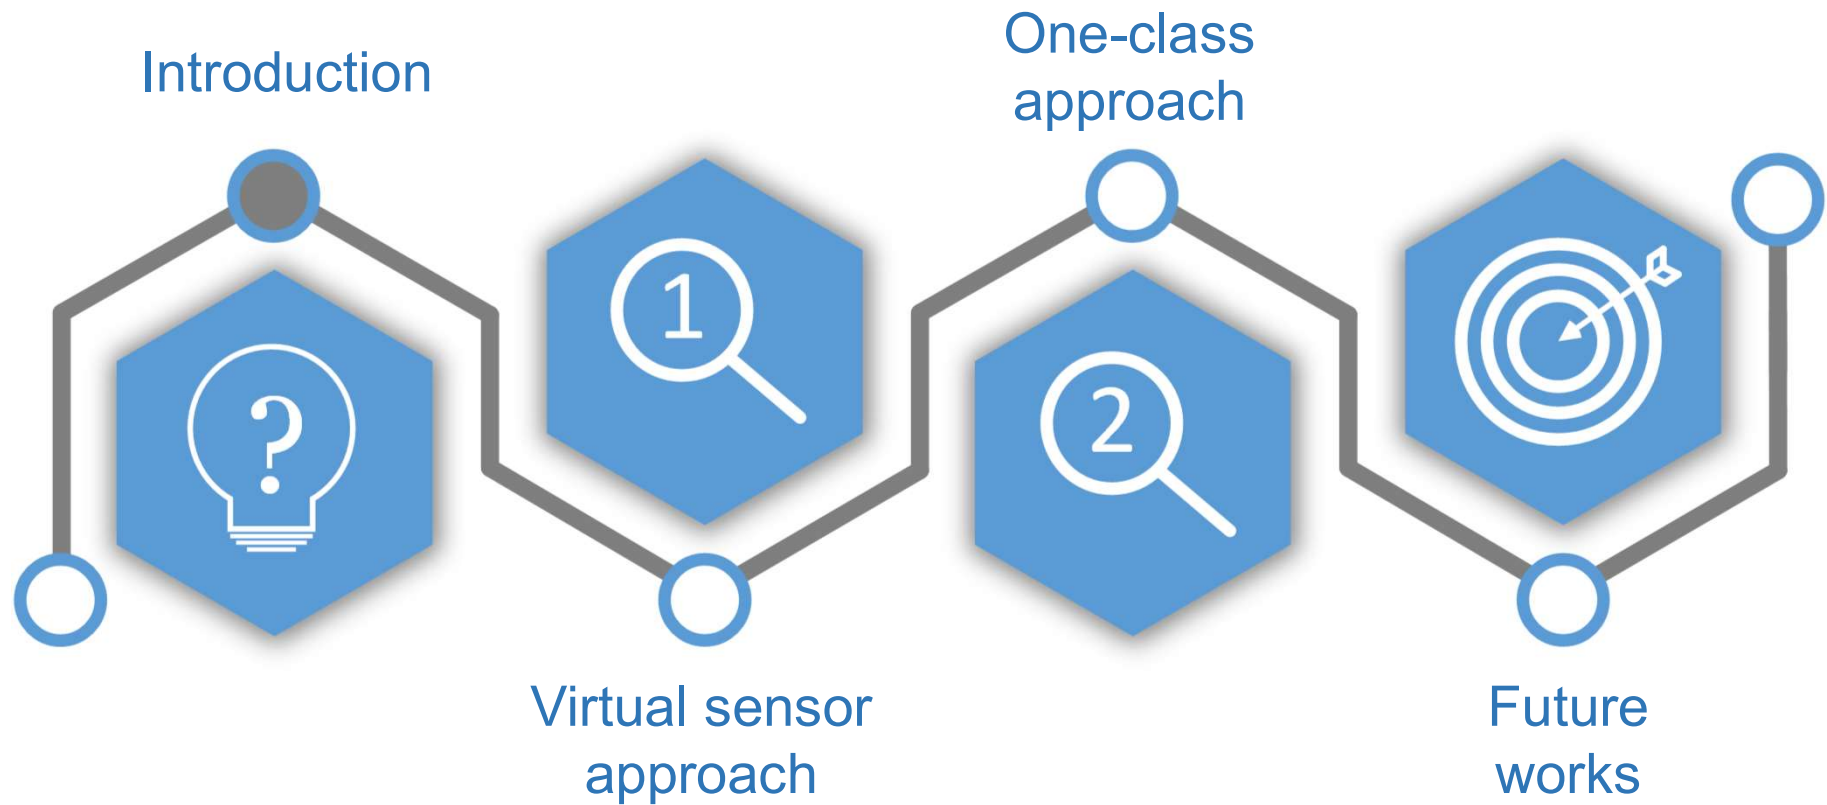

The anomaly detection problem

- Definition.
 - Data patterns that conform unexpected behavior.
- **Issues of anomaly detection.**
 - Lack of prior knowledge.
 - Unfeasibility of inducing known anomalies.
 - Noise appearance.
 - Difficulty of establishing limits between classes.

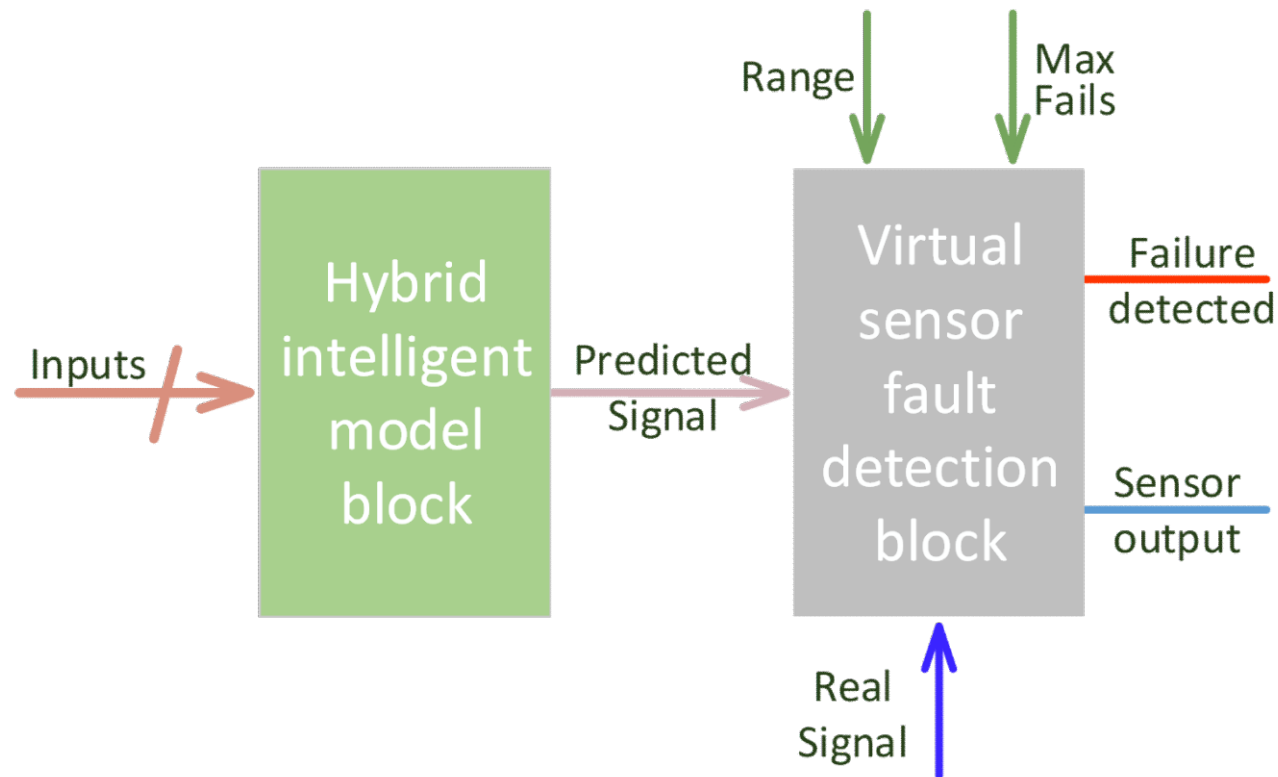

General Index

Virtual sensor approach

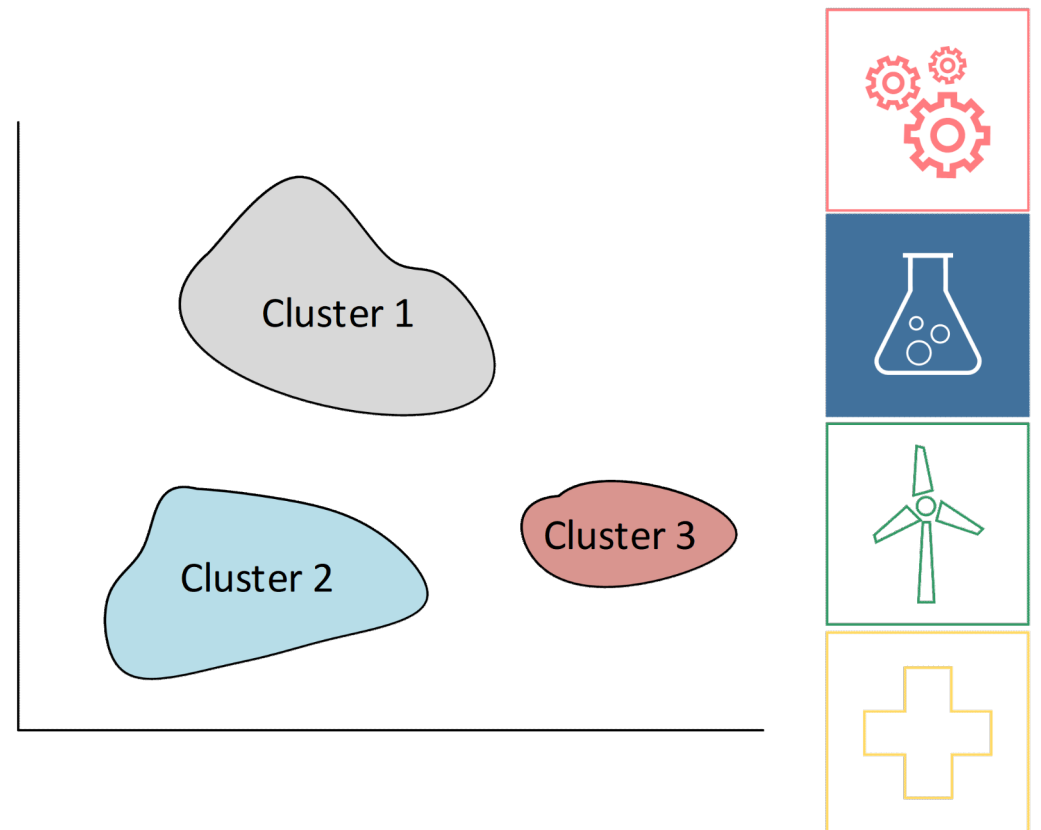

Fundamentals

Virtual sensor approach

Implementation

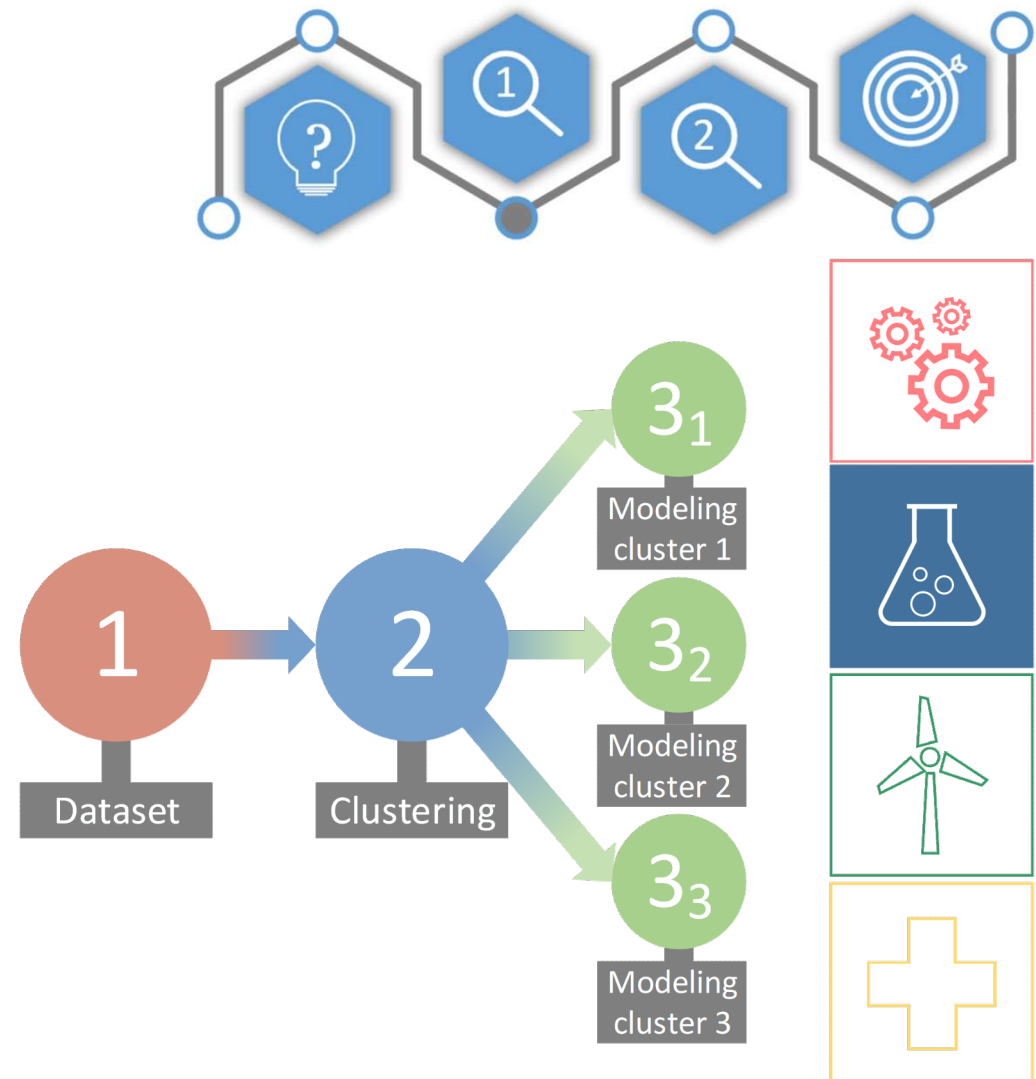

- Hybrid intelligent model block.
 - **Modeling process.**

Virtual sensor approach

Implementation

- Hybrid intelligent model block.
 - **Modeling process.**

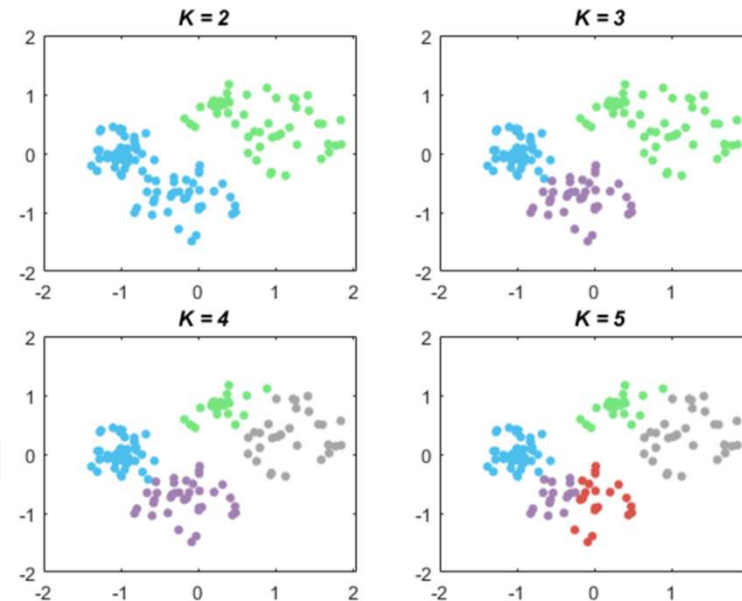

Virtual sensor approach

Implementation

- Hybrid intelligent model block.
 - Modeling process.
 - v Clustering.
 - **Kmeans.**

$$E(c_1, \dots, c_K) = \sum_{i=1}^N \sum_{j=1}^K I(x_i \in G_j) \|x_i - c_j\|$$

Virtual sensor approach

Implementation

- Hybrid intelligent model block.

- Modeling process.

- > Clustering.

- v Modeling.

- **MLP.**

Virtual sensor approach

Implementation

- Hybrid intelligent model block.

- Modeling process.

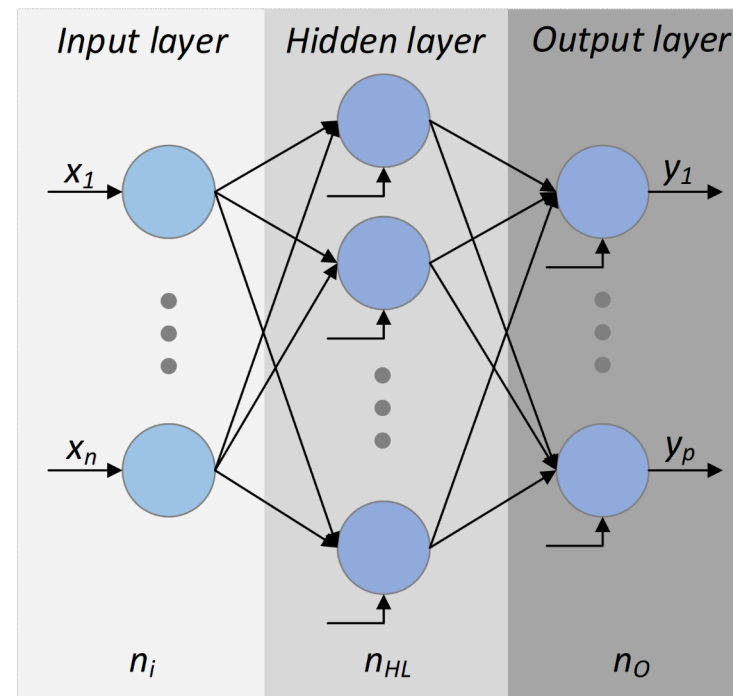

- > Clustering.

- v Modeling.

- **MLP.**

$$h = f_{\theta_1} (xW_1 - u_1)$$

$$y = f_{\theta_2} (hW_2 - u_2)$$

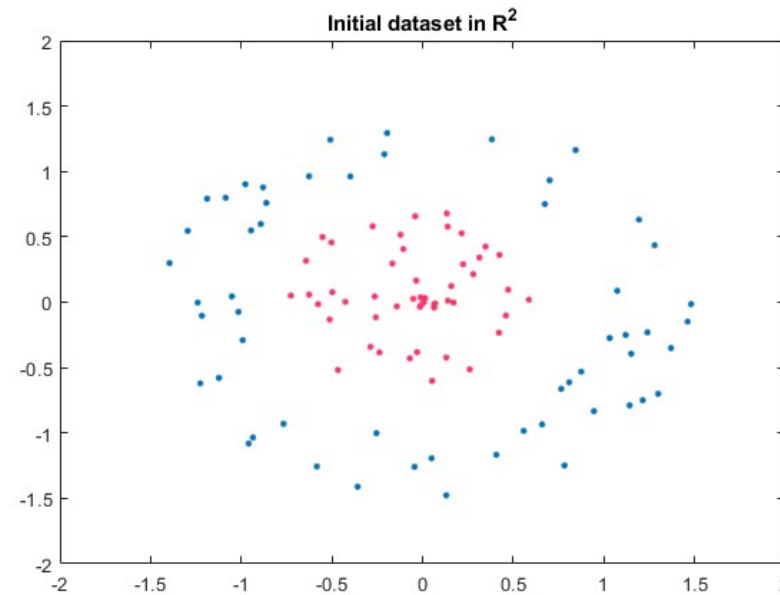

Virtual sensor approach

Implementation

- Hybrid intelligent model block.
 - Modeling process.
 - > Clustering.
 - v Modeling.
 - MLP.
 - **LS SVR.**

$$y = f(X) = w^T \delta(x) + b$$

Virtual sensor approach

Implementation

- Hybrid intelligent model block.

- Modeling process.

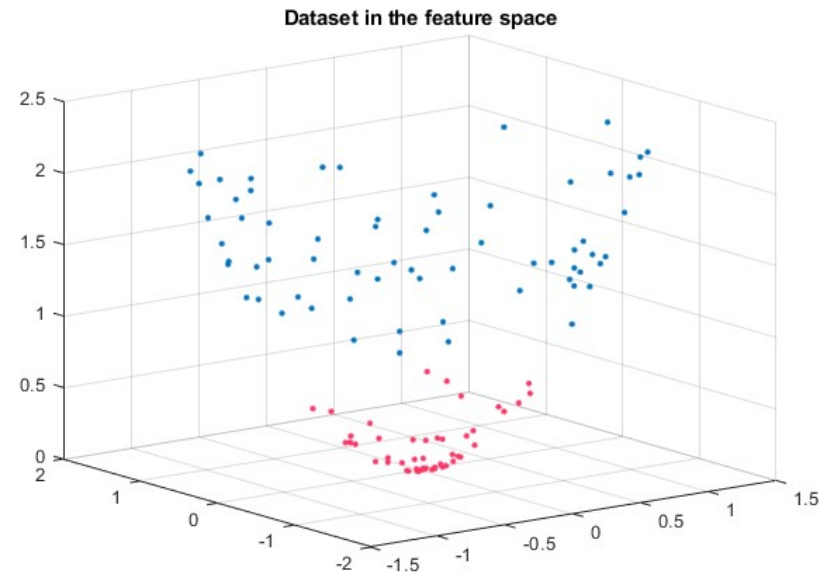

- > Clustering.

- v Modeling.

- MLP.

- **LS SVR.**

$$y = f(X) = w^T \delta(x) + b$$

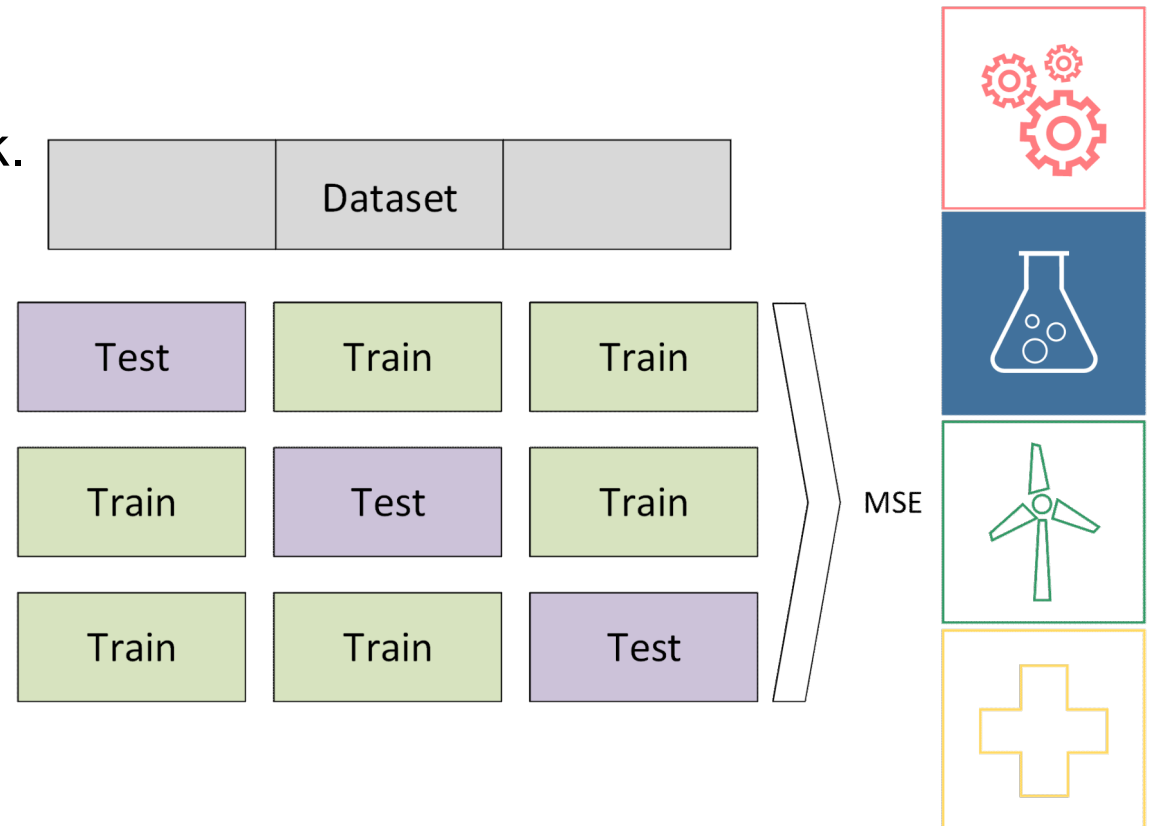

Virtual sensor approach

Implementation

- Virtual sensor fault detection block.

- **Fault block.**
- Counter block.
- Output selector block.

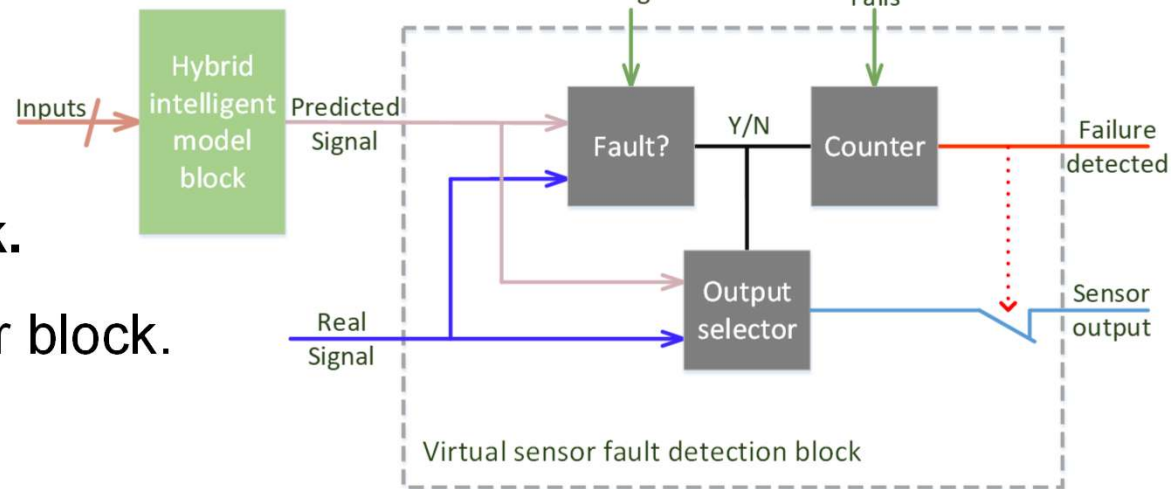

Virtual sensor approach

Implementation

- Virtual sensor fault detection block.

- Fault block.
- **Counter block.**
- Output selector block.

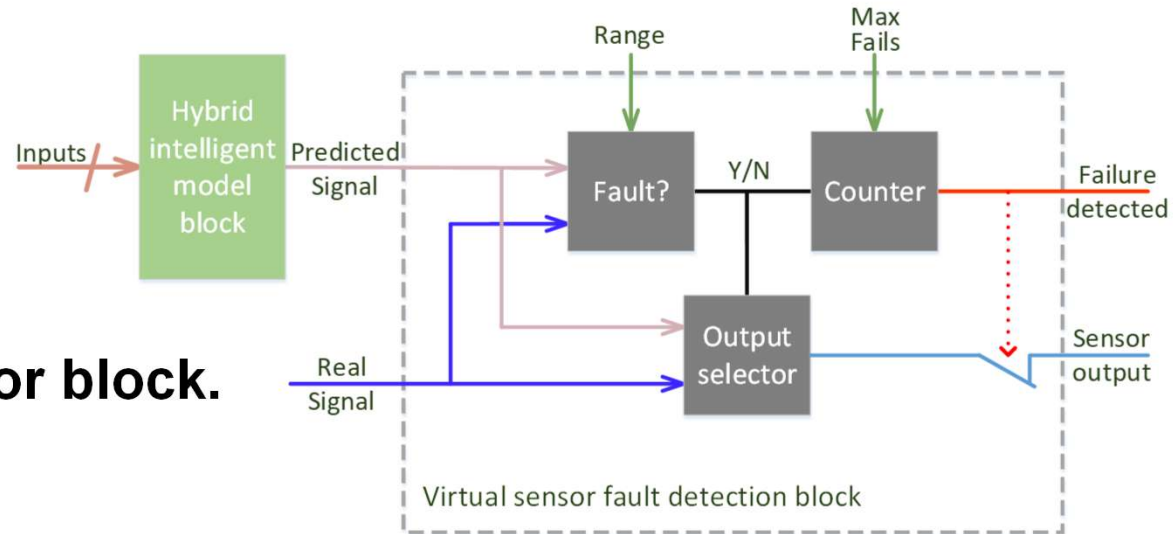

Virtual sensor approach

Implementation

- Virtual sensor fault detection block.

- Fault block.
- Counter block.
- **Output selector block.**

Virtual sensor approach

Bicomponent mixing system

- Article information.
 - **Title:** Virtual sensor for fault detection, isolation and data recovery for bicomponent mixing machine monitoring.

Virtual sensor approach

Bicomponent mixing system

Virtual sensor approach

Bicomponent mixing system

- Monitored variables.
 - Mixing proportions.
 - Two pump speeds.
 - Three flows.
 - Four pressures.

Virtual sensor approach

Bicomponent mixing system

- Monitored variables.
 - Mixing proportions.
 - Two pump speeds.
 - Three flows.
 - Four pressures.

Virtual sensor approach

Bicomponent mixing system

- Experiments and results.
 - Model inputs.
 - Output flow, Flow 2 ($t, t-1, t-2$).
 - Pumps pressures 1 and 2 ($t, t-1, t-2$).
 - Flowmeters pressures 1 and 2 ($t, t-1, t-2$).
 - Model Output.
 - Flow 1 (t).

Virtual sensor approach

Bicomponent mixing system

- Experiments and results.
 - Kmeans.
 - Clusters: 1:1:10.
 - MLP.
 - Hidden layer neurons: 1:1:15.
 - Different activation functions.
 - LS-SVR.
 - Self-tuned optimization toolbox.

Virtual sensor approach

Bicomponent mixing system

- Experiments and results.
 - Best configuration.
 - 7 clusters.
 - $MSE = 0,131 \cdot 10^{-3}$.

	Cluster 1	Cluster 2	Cluster 3	Cluster 4	Cluster 5	Cluster 6	Cluster 7
Technique	ANN-1	ANN-1	ANN-7	ANN-5	ANN-3	ANN-3	ANN-8
MSE	$0.165 \cdot 10^{-3}$	$0.159 \cdot 10^{-3}$	$0.097 \cdot 10^{-3}$	$0.55 \cdot 10^{-3}$	$0.183 \cdot 10^{-3}$	$0.163 \cdot 10^{-3}$	$0.122 \cdot 10^{-3}$

Virtual sensor approach

Bicomponent mixing system

Virtual sensor approach

Bicomponent mixing system

Virtual sensor approach

Bicomponent mixing system

- Conclusions.
 - The virtual sensor is presented as an useful tool.
 - The anomalies are detected, isolated and recovered.
 - Importance of user expertise.
 - Good performance of all models.

Virtual sensor approach

Bispectral Index Sensor

- Article information.
 - **Title:** Hybrid Intelligent System to Perform Fault Detection on BIS Sensor During Surgeries.

Virtual sensor approach

Bispectral Index Sensor

- Monitored parameters:
 - Analgesia.
 - Muscular blockade.
 - Hypnosis.
 - BIS sensor

Virtual sensor approach

Bispectral Index Sensor

Virtual sensor approach

Bispectral Index Sensor

Virtual sensor approach

Modeling anesthetic process

- Model inputs.
 - Propofol dose rate ($t, t-1, t-2$).
 - EMG signal ($t, t-1, t-2$).
 - BIS ($t-1, t-2$).
- Model output.
 - BIS(t).
- Dataset. 50 patients (42.788 samples).

Liquid level control plant

- Article information.
 - **Title:** Anomaly detection based on one-class intelligent techniques over a control level plant.

One-class approach

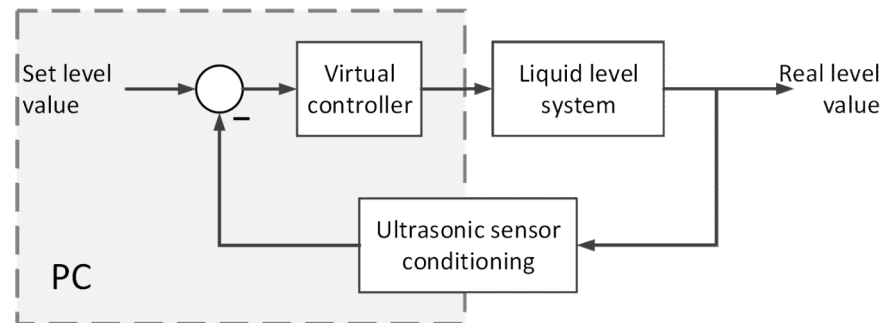

Liquid level control plant

One-class approach

Liquid level control plant

- Monitored variables.
 - Control signal.
 - Error signal.
 - Plant coefficients.
 - Set point.
 - Process value.

One-class approach

Liquid level control plant

- Dataset.
 - Target set: electric valve closed: 5400 samples.
 - Anomalies.
 - Electric valve open 10 %: 5400 samples.
 - Electric valve open 30 %: 5400 samples.
 - Electric valve open 50 %: 5400 samples.
 - Electric valve open 70 %: 5400 samples.
 - Electric valve open 90 %: 5400 samples.

One-class approach

Liquid level control plant

- Experiments and results.
 - Classifier inputs.
 - Control signal.
 - Error.
 - Plant coefficients.
 - Data conditioning.
 - 0 to 1.
 - Z-Score.

One-class approach

Liquid level control plant

- Experiments and results.
 - ACH.
 - Expansion parameter λ : 0.9, 1, 1.1.
 - Projections: 5, 10, 50, 100, 500, 1000.
 - Autoencoder.
 - Neurons in the hidden layer: 1:1:4.

One-class approach

Liquid level control plant

- Experiments and results.
 - SVM.
 - Outlier percentage: 0:1:10.
 - Kernel function: Gaussian.
 - Tested anomalies. Valve open (%): 10:20:90.

One-class approach

Liquid level control plant

- Experiments and results.

- ACH.

Projections	λ	AUC	Training time (min)
1000	1,1	99,78	13,25

- Autoencoder.

Hidden layer neurons	Conditioning	AUC	Training time (min)
4	Z-Score	99,49	8,83

- SVM.

Outlier percentage	Conditioning	AUC	Training time (min)
5	0-1	99,35	1,04

One-class approach

Liquid level control plant

- Conclusions.
 - The approach is validated over a laboratory plant.
 - Successful performance without the need of an expert user.
 - Influence of number of projections and parameter λ .
 - Influence of data conditioning.

#ProyectosCiber

Infraestructuras críticas ciberseguras mediante modelado inteligente de ataques, vulnerabilidades y aumento de seguridad de sus dispositivos IoT para el sector de abastecimiento de agua

2024 | 2025

Colabora:

INCIBE - Instituto Nacional de Ciberseguridad
UDC - Universidade da Coruña
CTC - Grupo de Investigación Ciencia y Técnica Cibernética

Equipo CTC:

José Luis Calvo Rolle	María elena Arce Fariña
Esteban Jove Pérez	Andrés José Piñón Pazos
Héctor Quintián Pardo	María Carmen Meizoso López
José Luis Casteleiro Roca	Francisco Javier Pérez Castelo
Francisco Zayas Gato	Benigno Antonio Rodríguez Gómez

Grupo de Investigación
Ciencia y Técnica Cibernética

Financiado por
la Unión Europea
NextGenerationEU

GOBIERNO DE ESPAÑA
MINISTERIO PARA LA TRANSFORMACIÓN DIGITAL Y DE LA FUNCIÓN PÚBLICA

SECRETARÍA DE ESTADO DE DIGITALIZACIÓN E INTELIGENCIA ARTIFICIAL

Plan de
Recuperación,
Transformación
y Resiliencia

INSTITUTO NACIONAL DE CIBERSEGURIDAD

#ProyectosCiber

Esta iniciativa se realiza en el marco de los fondos del Plan de Recuperación, Transformación y Resiliencia, financiados por la Unión Europea (Next Generation), el proyecto del Gobierno de España que traza la hoja de ruta para la modernización de la economía española, la recuperación del crecimiento económico y la creación de empleo, para la reconstrucción económica sólida, inclusiva y resiliente tras la crisis de la COVID19, y para responder a los retos de la próxima década
